

CAMERA SEES INSIDE SEWERS!

Workers lower the first camera of its kind into the manhole.

This amazing new technology is lowered into a manhole - where it records pictures of the underground world!

IBAK Helmut Hunger, GmbH focuses on quality engineering.

AMAZING NEW PIPELINE INSPECTION TECHNOLOGY!

by M.Sutton

It has been over 50 years since IBAK invented the sewer camera. As the world's oldest pipeline inspection camera manufacturer, we continue our commitment to quality engineering and forward thinking design. This year we are pleased to present the newest tractors and camera systems in our modular line of products.

The PANORAMO™ 150 Camera System has all the benefits of the larger system but is designed to be more economical while working in over 90% of the pipelines in North America.

The PANORAMO™ SI Manhole System is quickly becoming a standard for use in larger cities and smaller municipalities. Less time consuming than old methods, the PANORAMO™ SI allows users to capture incredible amounts of data about their manholes and review the data at anytime, back in the office. Please visit our website or call a local representative to learn more about these incredible new technologies.

Past Proven Future Ready
